Crypto Pem Format Converter: how it is put together

Converts a PEM encoded private key, public key, or Diffie-Hellman parameter set between container formats: PKCS8, TraditionalOpenSSL, SubjectPublicKeyInfo for public keys, and

sketched from the files

Crypto Pem Format Converter: the run, step by step

If a step fails, the honest run says so and stops.

traced, not guessed, GK

Product map: what Crypto Pem Format Converter is for

WHAT IT IS

Converts a PEM encoded private key, public key, or Diffie-Hellman parameter set between container formats: PKCS8, TraditionalOpenSSL, SubjectPublicKeyInfo for public keys, and PKC.

WHAT GOES IN

The files at the top of the tree: main.py, README.md, requirements.txt.

WHAT COMES OUT

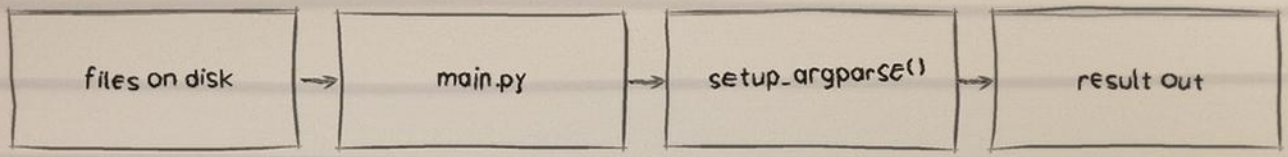

What the top files produce when they run or get read. Nothing else is promised.

WHERE IT STOPS

No service behind it, no account, no upload. If a path is untested, VISUAL.md says so.

mapped by hand, GK

Crypto Pem Format Converter: data flow, in one direction

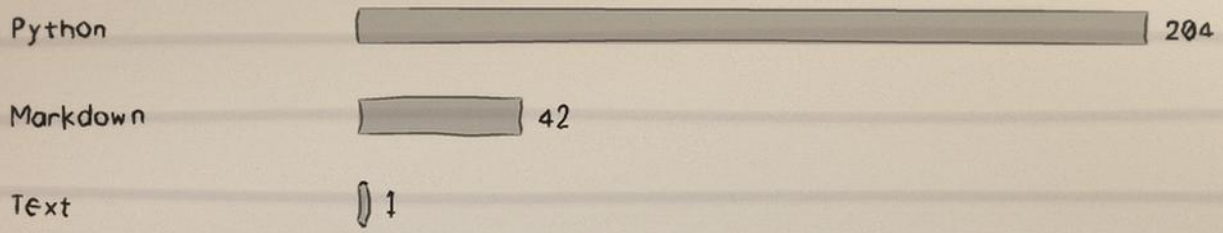

One direction. Anything the code does not do is not drawn.

second sheet, GK

Crypto Pem Format Converter in numbers, counted 2026-10-30

Counted from the local snapshot of this repo. Method for every number: VISUAL.md.

5 files in the tree.
7 commits, first 2025-06-19, last 2026-10-30, from the local git log.
No test files by name in this snapshot.

counted and drawn, GK

Crypto Pem Format Converter: schematic of the apparatus

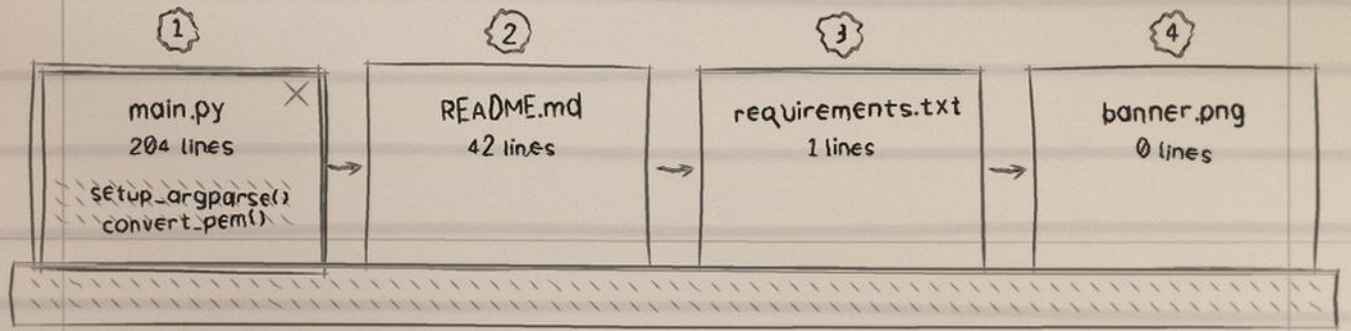

the system as a machine: parts, flow, and measurements

construction lines left in, as drawn

parts list

1. main.py
2. README.md
3. requirements.txt
4. banner.png

in flow order, first to last

base plate: the repo itself, sectioned

span: 5 files, 247 lines counted

turns of the crank so far: 7 commits, 2025-06-19 to 2026-10-30

measured and sketched, GK
